TU Delft PhD Thesis Template

Patrick Altmeyer

This document is a template demonstrating the `thesis-tudelft` format.

INTRODUCTION

This is a Quarto extension for generating your TU Delft PhD Thesis in Quarto.

COOL QUARTO THINGS

CUSTOM CALLOUTS

The template adds custom cross-references that can be combined with standard callout blocks like Note 1.

> **ℹ Note 1: Current Limitations**
>
> This is a makeshift solution that relies on setting the default behaviour of callout blocks to `callout-appearance: simple`. We rely on the default style of callout blocks, e.g. the `.callout-tip` for questions, where the light bulb icon sort of makes sense.
>
> Ideally, we would like to have either custom callout blocks or custom theorem environments. There is coatless-quarto/custom-callouts, which unfortunately does not support PDF, and ute/custom-numbered-blocks, which I could not get to work in combination with custom cross-references. For custom cross-references, Quarto currently only supports float environments, so no custom theorem environments are supported yet.

TRQ 1 is a Thesis Research Question.

> **💡 TRQ 1: What are Thesis Research Questions?**
>
> This is a Thesis Research Question, that you might want to use in the introduction of your thesis. It can be cross-referenced using the custom `trq` key.

RQ 1 is a standard Research Question.

> **💡 RQ 1: What are Research Questions?**
>
> This is a standard Research Question, that you might want to use in any individual chapter. It can be cross-referenced using the custom `rq` key.
